Project Name	India's Agricultural Crop Production Analysis
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS "I want to know which crops are producing more in my state or district." "It is difficult to get all agricultural production data in one place." "I need accurate insights to decide which crops to cultivate for better profit." "If I had reliable data and predictions, planning would be much easier."	THINKS - He thinks crop production trends change every year due to weather, soil, and market conditions. - He wonders which crops are most suitable for his region and season. - He believes data-driven insights can reduce risk and increase productivity. - He hopes analysis and predictions will help him make better farming decisions.
PERSONA NAME (Indian Farmer / Agricultural Researcher / Policy Planner)	
DOES - Checks crop production reports from government websites, agriculture portals, or news. - Compares crop yields across states, districts, and seasons. - Uses past experience and advice from experts to decide crop selection. - Attends agricultural workshops and consults extension officers for guidance.	FEELS - Frustrated due to scattered, hard-to-understand, or delayed agricultural data. - Uncertain about which crop will yield better returns. - Concerned about climate variability, pests, and market prices. - Confident and satisfied when data insights help improve productivity and income.
