### Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

#### Example:

| Problem Statement (PS) | I am (Customer)                                              | I'm trying to                                                                              | But                                                                                      | Because                                                                                      | Which makes me feel                                                                         |
|------------------------|--------------------------------------------------------------|--------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| PS-1                   | A farmer, agricultural researcher, or policy maker in India. | Understand and analyze crop production trends across different states, seasons, and years. | I lack a consolidated and easy-to-analyze source of reliable data on crop production.    | Data is scattered across multiple sources and is difficult to access, compare, or interpret. | Uncertain about decision-making for better planning, productivity, and resource allocation. |
| PS-2                   | An agricultural analyst or data scientist.                   | Predict future crop yields and identify factors affecting production.                      | There is limited use of advanced analytics and insights from historical data.            | Lack of proper analysis tools and integration of factors like rainfall, soil, and season.    | Frustrated and unable to provide accurate forecasts and recommendations.                    |
| PS-3                   | Government agencies and planners.                            | Make informed decisions and formulate policies for agriculture development.                | It is hard to visualize trends, seasonal patterns, and regional differences effectively. | Existing reports are static, not interactive, and lack real-time insights.                   | Concerned about inefficient planning and achieving agricultural growth targets.             |
