

Customer Journey Map

Date	30 June 2026
Team ID	—
Project Name	India's Agriculture Crop Production Analysis
Maximum Marks	2 Marks

Customer Journey Map Overview

Map out the customer’s experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage. This mapping strategy guides cross-functional technical teams to identify functional boundaries, backend bottlenecks, and system optimization layers required to build an intuitive agriculture data analytics platform.

Journey Map Matrix — Core Experience (Part 1)

STAGE	1. Discover & Access	2. Select & Filter Data	3. View & Analyze Insights	4. Compare & Drill Down	5. Export & Share	6. Take Action & Monitor
Customer Actions	Visits platform, logs in and explores dashboard	Selects crop type, state, district, season and year	Views production trends, charts, maps, and statistics	Compares states/ districts, drills down to crop level data	Exports reports, downloads data, or shares insights	Uses insights for decision making and monitors updates
Touchpoints	Website / Login Page, Dashboard Home	Filter Panel, Search, Dropdowns	Dashboard Charts, Maps, KPIs	Comparison View, Drill-down Tables	Export Button, Share Option, Reports	Alerts, Update Notifications, Saved Reports
Customer Thoughts	"Is this data reliable?"	"I want accurate data for my region."	"What are the production trends this year?"	"How does my state compare with others?"	"I need this report for my presentation."	"How can I use this insight for planning?"
Customer Feelings	Curious but cautious	Focused and intentional	Informed and satisfied	Analytical and engaged	Efficient and accomplished	Confident and proactive
Process Ownership	Marketing & UI/UX Team	Frontend Team & Data Team	Frnanalytics & Visualization Team	Data Analytics Team	Backend & Reporting Team	DevOps & Notification Service Team
Improvement Opportunities	Improve data trust indicators and onboarding guidance	Simplify filters and add smart suggestions	Enhance visual clarity and insight summaries	Add advanced comparison and AI insights	Enable scheduled reports and more export formats	Add alerts, forecasts, and recommendations

Phase of Journey India's Agriculture Crop Production Analysis	STAGE 1: DATA EXPLORATION & SELECTION	STAGE 2: ANALYSIS & VISUALIZATION	STAGE 3: INSIGHTS & ACTION
Actions <i>What does the user do at this step?</i> 	• Accesses the India Crop Production dashboard on the platform. • Selects crop type, year range, and state/region from filters. • Loads available datasets from government sources (DA&FW, MOSPI, etc.).	• System processes the selected data. • User views interactive charts, tables, and maps. • Compares crop production across states, years, and seasons. • Applies advanced filters and metrics (Yield, Area, Production).	• Reviews key insights and trends generated. • Identifies top producing states and yield patterns. • Exports reports, charts or downloads data. • Uses insights for planning, policy making, or research purposes.
Touchpoint <i>What part of the service do they interact with?</i> 	• Homepage / Overview Dashboard. • Crop, Year, Season & State Filter Panel. • Data Source Information Panel. • Dataset Preview Table.	• Interactive Visualization Dashboard. • Line / Bar / Pie Charts. • India Map (State-wise Choropleth). • Data Table with Sorting & Export.	• Insights Summary Cards. • Trend Analysis Graphs. • Report Generation Module. • Download / Share Options.
Customer Thought <i>What is the user thinking?</i> 	• "I want to see the latest crop production data for rice in Andhra Pradesh." • "Which datasets are available and reliable?" • "This interface is easy to filter and explore."	• "The visualizations help me compare states quickly." • "Why is the yield lower in some regions this year?" • "I can drill down to district level for more details."	• "These insights are very useful for decision making." • "I can export this report for my presentation." • "This analysis helps in better planning and forecasting."

Journey Map Matrix — Operational Alignment (Part 2)

Phase of Journey	STAGE 1: DATA EXPLORATION & SELECTION	STAGE 2: ANALYSIS & VISUALIZATION	STAGE 3: INSIGHTS & ACTION
 Customer Feeling <i>What is the customer feeling?</i>	Inquisitive & Optimistic: Eager to explore crop production trends, datasets, and options to uncover valuable agricultural insights.	Engaged & Analytical: Actively comparing patterns, exploring data visualizations, and seeking deeper understanding of regional variations.	Confident & Empowered: Satisfied with clear insights and actionable information to support better farming decisions and policy planning.
 Process Ownership <i>Who is in the lead on this step?</i>	Product & Data Team Manages intuitive dashboard UI, data catalog, filters, and seamless access to reliable agriculture datasets.	Analytics & Engineering Team Handles data processing, statistical computations, model optimization, and interactive visualization engines.	Agri Insights Team Generates insights, interprets trends, and delivers reports and recommendations for stakeholders.
 Opportunities <i>How can we optimize this stage?</i>	• Add smart dataset recommendations based on user intent. • Provide guided walkthroughs and contextual help for first-time users.	• Enable real-time map and chart updates with dynamic filters. • Introduce predictive analytics for yield forecasting and risk estimation.	• Offer downloadable actionable reports and policy briefs. • Integrate alerts for anomalies, low yield risks, and opportunities.
 Key Metrics <i>How do we measure success?</i>	• Dataset views & filter usage • Time to first data load • User retention in exploration phase	• Chart interactions per session • Time spent in analysis • Data query performance & response time	• Insights shared / reports generated • User actions taken based on insights • Return visits & engagement rate
