

Problem-Solution Fit

Date	2 July 2026
Team ID	
Project Name	India's Agriculture Crop Production Analysis
Maximum Marks	5 Marks

Problem-Solution Fit Canvas

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template from 1052.jpg.

1. CUSTOMER SEGMENT(S) [CS] • Farmers: Small, marginal, and large-scale farmers across India growing major crops. • Agricultural Analysts & Researchers: Professionals analyzing crop trends, yields, and productivity. • Government & Policy Makers: Agencies and planners working on agricultural development and food security.	6. CUSTOMER LIMITATIONS [CL] <i>E.G., BUDGET, DEVICES, DATA</i> • Limited access to real-time and reliable crop production data. • Lack of affordability for advanced data analytics tools. • Poor data integration from multiple sources (states, districts, seasons). • Limited digital literacy in rural areas and among smallholder farmers.	5. AVAILABLE SOLUTIONS [AS] <i>PROS & CONS</i> • Government Portals (e.g., data.gov.in, Agmarknet): Provide data but lack user-friendly analysis and visualization. • Excel-based Reports: Easy to use but time-consuming and prone to errors with large datasets. • Private Agri Analytics Tools: Offer insights but are costly and not widely accessible to all farmers.
2. PROBLEMS / PAINS [PR] <i>+ ITS FREQUENCY</i> • Scattered Data: Crop production data is fragmented across multiple sources. (Frequency: Daily/Weekly) • Delayed Insights: Reports are released late, affecting timely decisions. (Frequency: Seasonal) • Difficult Comparisons: Hard to compare crop production across regions, seasons, and years. (Frequency: Monthly/Annual)	9. PROBLEM ROOT / CAUSE [RC] • Data collected manually and reported with delays. • Inconsistent formats and lack of standardization across regions. • Lack of centralized platform for real-time data aggregation and analysis. • Limited use of data science and visualization in current systems.	7. BEHAVIOR [BE] <i>+ ITS INTENSITY</i> • Farmers rely on past experience or local advice for crop decisions (Intensity: High). • Analysts use manual methods to process data (Intensity: Moderate). • Policy makers depend on periodic reports for planning and forecasting (Intensity: High).

INDIA'S AGRICULTURE CROP PRODUCTION ANALYSIS

Empowering Farmers. Enriching Agriculture. Ensuring Food Security.

Problem-Solution Fit Canvas (Continued)

Strategic mapping layout showcasing behavioral channels, emotional indicators, and the integrated conceptual solution response framework.

3. TRIGGERS TO ACT [TR] • Unpredictable weather patterns affecting crop yield. • Lack of timely and accurate information on crop production. • Difficulty in deciding the right crops and practices. • Low productivity and income due to resource constraints.	10. YOUR SOLUTION [SL] AI-Powered Crop Production Analysis Platform: An intelligent platform that collects data from satellite imagery, weather APIs, soil sensors, and government databases to analyze crop production trends, predict yields, recommend best crops, and provide real-time insights and advisories for farmers and stakeholders. 	8. CHANNELS OF BEHAVIOR [CH] ONLINE: • Mobile app for farmers and agri-advisors. • Web dashboard and analytics portal. • SMS and WhatsApp alerts. OFFLINE: • Krishi Vigyan Kendras (KVKs) and agricultural extension centers. • Farmer training programs and field visits.
4. EMOTIONS [EM] <i>BEFORE / AFTER</i> • Before: Uncertain, worried about crop loss, lack of confidence in decisions. • After: Informed, confident in choices, optimistic about higher productivity and better income.
